History: This message has been replied to and forwarded.

Earl, the sites we have identified are located on the 752 road, by Prospector Creek (boundary of section 29 and 30,north road crossing), and another preferred site up the 1214 road along Eagle Creek section 23 north. These are both 10-15 miles upriver from Avery. They are old filled waste sites used by us and the County, and should have decent quality waste material. I can get you a map with the locations, just let me know. I'm out of town the first week in March, feel free to contact Pete Ratcliffe at 245-6071 if you have any questions.

Subject: RE: EPA Avery Landing Removal Action

Hello,

Shoshone County has identified two potential rock pits on USFS administered lands nearby the Avery Landing cleanup site. One pit is referred to as the Avery pit located in or near Avery (north latitude 47.252; west longitude 115.797) and the other pit is referred to as the Bluff Creek pit (north latitude 47.181; west longitude 115.495). Are these two pits you are considering? Are there others? We're going to be on-Site next Wednesday (02/29) and Thursday (03/01). Snow may prevent visiting some sites, but we might be able to visit others, including those areas where there may be road maintenance materials. If possible, please provide the locations of the various sites by early Tuesday or next week.

Thank you for your continued assistance in this matter.

Earl, I'm working on a solution for your project needs. A dispersed camping site just upstream from Avery can be made available, I'll get some more specific info to you soon. We also are looking into the fill material issue, and have identified some old rock pits that are currently filled with road maintenance waste materials that we would make available for use in the backfill operation. I'll keep working on the details and get you some specifics here later this week. Is there a maximum distance you would be willing to drive to get to a fill source?

Hello,

The attached letter is written as a follow-up to our conversation about certain assistance the USFS might be able to provide EPA in support of the subject cleanup action. Also attached is a site vicinity map showing the approximate location of the Avery Landing Site. I'm also copying Mindy because I have had a few conversations with her about the Site. I'm out-of-town next week, but could be reached via my cell phone (208.659.8241) and I will have access to my email (liverman.earl@epa.gov). Thank you for your consideration of this matter.
